

FINN·POWER

CRIMPING MACHINES

quality for professionals

Finn-Power quality:
Accuracy
Reliability
Flexibility
Productivity
Worldwide distribution network

Finn-Power crimping machines are manufactured using the state-of-the-art manufacturing equipment and technology. The precision manufactured parts together with our engineering and assembly expertise, combined with our quality control and final testing procedures, result as, reliable and accurate crimping machines for your production needs. We make the quality for you.

Finn-Power crimping machines are produced by Lillbacka Powerco with 40 years of manufacturing experience of crimping machines. Finn-Power products have been developed to meet the requirements in a variety of different industries. They are used globally in such industries as hydraulic hoses, automotive components, construction equipment, heavy machinery, railroad, marine, electric power transmission, industrial hoses and tube, pipe, wire and cable industry, etc. Generally where ever metals, plastics, rubber, fiberglass, wood and ropes are joined or formed Finn-Power products are being used.

Finn-Power products offer the highest and most dependable quality thanks to the many years of experience in product design, engineering, development and manufacturing. Products are designed and produced with an eye on customer's productivity. The operator friendly functions make them easy to use while providing reliability and long-life.

The outstanding driving force behind the success of Finn-Power products lies in the many professional and skilled personnel with a go-ahead attitude, driven by a strong willingness to be of service to our global customers who have standardized on the Finn-Power products.

FINN-POWER

Crimping since 1973

Crimping is an easy, fast and cost effective method for joining and forming parts.

Finn-Power crimping machines are reliable, accurate and flexible machines with easy and fast set up times and multiple cost effective tooling options. These factors have made Finn-Power machines well accepted among manufactures in numerous industries world wide.

More than you can imagine

Crimping, joining, forming:

Tupes & pipes

Wires & Cables

Hoses & Ropes

Plastic & Fiberglass

Rubber etc.

Finn-Power marking dies offer the capability to imprint alpha/numeric characters during the crimping operation.

Special die sets can be made for virtually any diameter, length or shape.

The benefit of special die sets is the ability to allow more versatile usage of the crimping machines.

FINN-POWER

Crimping since 1973

Constant development to offer the latest technologies and features keeps Finn-Power in the leading edge of crimping machine controls. Finn-Power controls are well-known for their ease of use and wide range of features.

MS control

MS control is best suited for single-piece production.

The MS control is the most basic and easy to use control offered by Finn-Power. However, the best feature is its interactivity: MS control can be taught the opening. When the desired opening is set the machine will remember it and work semi-automatically.

UC control

Finn-Power UC control is a modern user interface based on icons, a selector and clear, visual display of all crimping parameters. UC control has exact and logical navigation. All most commonly used functions are easily accessible. Tool Change Wizard tells when the die set has to be changed and guides the operator during the die change.

The stand-by function saves energy. Machine runs only when crimping is started and turns to the powersave mode after a set time. Other features are the connectivity via ethernet and USB ports and expandability. Various different options enable pressure crimping, step crimping and online quality control.

UC standard features:

Diameter crimping
Manual / automatic mode
Die position displayed
Energy saving mode
Data storage
USB-connection
asc./desc. counters
Tool Change Wizard

UC1

Finn-Power UC1 option package is ideal solution when crimping is done according to force instead of crimping based on diameter.

Pressure control can be used when parts have large tolerances or when sensitive materials need to be crimped.

In pressure crimping the dies will stop according to the set pressure. Crimping by diameter can be used as well.

Pressure crimping

UC2

When part has to be crimped into several different diameters, UC2 option is beyond comparison.

Multi-step crimping is done according to crimping diameter or crimping pressure.

Crimping diameter or crimping pressure is set individually to each step, as well as the retraction diameter.

Multi-step crimping

UC3

Finn-Power UC3 includes all options for pressure crimping, multi-step crimping and online quality monitoring. Online quality monitoring controls the crimping quality during production.

Monitoring function has adjustable limits for the crimping result. If the crimping result is not within set limits, the control e.g. stops the machine.

The monitoring screen displays the adjusted crimping parameters, limiting values, measurement results and the bars for visualizing the crimping result.

UC3 saves the measurement results and crimping parameters automatically to the control memory from which they can be transferred by using USB or Ethernet (FTP protocol).

P16HP

Finn-Power's portable crimping machines are designed for field service when repairs must be made on-site. Finn-Power's service machines are simple and straight-forward in construction, easy to operate, and highly reliable.

The light weight of Finn-Power's service machines allows the portable units to be easily carried to any location.

P20 series of crimping machines represent the "lightweights" of the Finn-Power range. They are simple and straightforward in construction, easy to operate, and can easily be carried to where they are needed. The most popular applications for these portable Finn-Power crimping machines are in repair shops and in industrial maintenance units.

Finn-Power MS and UC controls represent the most advanced crimping controls in the market. An interactive MS can be taught the opening and UC control consists the possibility to be extended with various targets.

Both models save energy with their powersave mode and environment by using eco-friendly rapeseed oil.

An entirely novel construction makes it possible to use the machine both right and left handed and feeding direction can be from front and back. Also normal service actions can be made easily.

Finn-Power 32MS and 32UC has the same fabulous crimping features as the 20 series of crimping machines. They are mid-range in terms of power, but compact from the point of view of space requirements.

32 machines provide 2000 kN crimping force in a highly compact, ergonomical design.

They are ideally suited for single-piece production in machine shops, repair workshops etc.

All table-top machines can be mounted on a QC Tool Base. Up to 16 die sets can be stored in a base for operator convenience.

- 3) See table for die set data
- 4) Maximum opening is the total die travel. Add this value to the minimum crimping diameter of the die set used. The result is the maximum opening of the machine with die set in place.
- 5) FP140 dies can be used without adapter dies
- 6) Hydraulic hose / industrial hose

Finn-Power P51 and P60 models are the strongest table top machines in Finn-Power general machine line. Their wide opening makes it possible to crimp industrial hoses up to 4".

As there is no axial movement of the dies during the crimping, positioning is easy and accurate. Further, the control unit can be turned within 100 degrees to suit operator's preferences.

Finn-Power UC control extends these models' targets of use by giving the possibility to make a crimp according to a diameter and/or pressure.

Finn-Power 120 is unbeaten in terms of speed, precision, durability and quality.

Hydraulic- and crimping units are separated for allowing optimal use of space. Finn-Power 120's operating unit with free placing and all-round use possibility enables the machine to be used from front, back and side.

- 1) With standard dies. Crimping range can be increased with special dies.
- 2) Theoretical with 10 mm cycle
- 3) See table for die set data
- 4) Maximum opening is the total die travel. Add this value to the minimum crimping diameter of the die set used. The result is the maximum opening of the machine with die set in place.

120UC

Finn-Power 120, 140 and 145 models have 3 die racks, side table to the right and a mirror as a standard.

FP20UC

140UC

Due to the large opening and strength Finn-Power 140 and 145 models are suitable for middle range hydraulic and industrial hoses.

The Finn-Power 145 crimping machine is ideal choice when your operation requires crimping of very long ferrules. It has adapter dies with a length of 120 mm as a standard size.

King Crimper 1200 is the biggest and strongest crimping machine in Finn-Power production range.

The primary market is the oil & gas industry for crimping pipes, tubes and fittings.

The extremely large opening, enormous crimping force, the most advanced crimping control in the market, quick and precise joint, consistent repeatability, free placing of the operating unit and the remote control guarantees that there are no limitations to the possibilities of applications uses for the King Crimper 1200.

SP100 UC

Hose assemblies in the automotive industry are often comprised of odd shapes and sharp angles. The traditional pass through head structure of most hose crimping machines does not accommodate such assemblies. This is why Finn-Power has introduced an open head structure, which allows the hose to be fed from the side. This innovative structure makes crimping of any odd shaped hose assemblies easier and more accurate than ever before.

SP1200 is the biggest and strongest machine in the side feed crimping line.

The innovative structure of this model allows the hose to be fed from the side and makes crimping of any odd shaped hose assemblies easier and more accurate than ever before.

FINN-POWER's NC20, NC30 and NC40 series nut crimping machines provide fast, accurate operation in crimping the nut / ferrule / bush set on ends of hydraulic hoses. These models are intended for use in serial manufacturing.

A special centring pin, selected according to ferrule size is used during the crimping. The machine produces accurate and consistent results.

Outside high-pressure hydraulics there are numerous hose applications where relatively low crimping force is required. These are commonly found in automotive technology, low-pressure water systems, house-hold equipment etc.

Finn-Power's CC22 and CC24 crimping machines maximize productivity through an optimal force/speed ratio.

Fume extractor

Finn-Power CM30 and CM35 cutting machines are manually operated and designed for service use, in workshops and service vans. They can be used for cutting up to 2" braided hoses efficiently, fast and safely. Both models are equipped with fume exhaust connections.

CM35

CM30

The CM75 and CM91 hose cutting machines have been designed to cut up all types of hoses up to 2" and 3" diameter 6-spiral hoses.

The 520/650 mm diameter blades operate at 3000 rpm. The hose is pushed against the blade by a pneumatic cylinder (CM75) or by spindle motor (CM91). Piston movement speed can be quickly and easily adjusted to choose optimal cutting speed for each type of hose.

Lower speeds are used with thick hoses thus overheating of the blade is avoided. The blade can be resharpened when necessary. The cutter has a built-in bin for the collection of cutting waste. The blade is protected by a metal safety guard.

footnotes

- 1) With standard dies. Crimping range can be increased with special dies.
- 2) Theoretical with 10 mm cycle
- 3) See table for die set data
- 4) Maximum opening is the total die travel. Add this value to the minimum crimping diameter of the die set used. The result is the maximum opening of the machine with die set in place.
- 5) Overload controlled
- 6) 1-phase / 3-phase
- 7) FP140 dies can be used without adapter dies
- 8) Hydraulic hose / industrial hose
- 9) With adapter dies
- 10) Hose cutter
- 11) Full cycle / 10 mm cycle
- 12) Die travel / feeding channel
- 13) NC20, NC30 and NC40 dies can be used
